

DAIICHI RESTAURANT MANAGEMENT SYSTEM

USER MANUAL

OBJECTIVE:

Daiichi's Restaurant Management System is a comprehensive integrated centralized system based on the latest technology from Microsoft.

Having **Daiichi Restaurant Management System** in-place will allow the management to easily focus on the procedures of the system.

BENEFITS:

By utilizing **Daiichi Restaurant Management System**, you stand to exploit the following benefits:

A Fully Accredited Solution:

Daiichi Restaurant Management System meets the rigorous standards, guaranteeing you fast, efficient and painless procedure runs. It is designed to reduce your operating costs and give your staff more time for value-added activities. This solution provides excellent functionality at a highly competitive price, and comes complete with in-built help systems.

Daiichi Restaurant Management System provides enhanced features with more flexibility and seamless integration. It gives Restaurants of today a robust, comprehensive solution for processing in-house system.

Common Benefits

- Based on MS SQL database to fit common desktop configurations
- Fully multi-user for use across an enterprise
- Fully developed with common set of core functions
- Data is at your fingertips
- Print summary or detail reports
- Reviews of each staffs activities
- Core Functions

- Standard Data Export - flexible data export file formats
- Application Security - configure user logins to control access to application functions
- Manuals - open manuals from within applications
- Reports - standard application reports
- With this system you finally have a system with single source data entry capabilities.
- Increased functionality
- Automated and more efficient process
- More consistent and accurate data
- Efficient search modes

Administration Benefits

- Lower overall cost for management needs
- Greater flexibility in deadlines
- Professional preparation of all Reports
- Owner/manager are not tied to office for extended periods of time
- Complete confidentiality

Compatibility: The system is divided into two sides

Server- where the database resides (back end)

Client – where the exe file (executable file) of the program (the front end)

Operating system- for the server side Windows NT Server, Windows 98 or 2000 for the client side

Minimum system requirement

- 64MB of RAM or above
- Pentium III Processor or above
- 4GB of Hard disk or more

Software's used

- Microsoft Visual Basic 6.0 (Front end)
- Microsoft SQL Server2000 (Back end)
- Seagate Crystal Reports 10 (Reports)

COMMON OPERATIONS OF USAGE

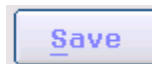

While using this application software, commonly user will come across below modes of operations. This will enable user to know and understand basic operation of this software application.

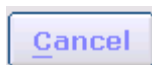

This operation enables user to add a new record.

This operation enables user to modify existing record.

This operation enables user to save the new or old changes that has been made to the record.

This operation enables user to cancel the changes made by user to that record and get back to last saved form of record and values

This operation will allow user to search through the records for a particular entry of data allowing user to find any particular information in big pool of values

This mode of operation enables user to print a particular record or report for future references and proofs.

This mode of operation allows user to close and exit opened modules. User needs to save or discard changes made before performing this tasks or user may loose the data, which will not be regained.

WORKING WITH APPLICATION SOFTWARE DAIICHI - RESTAURANT MANAGEMENT SYSTEM

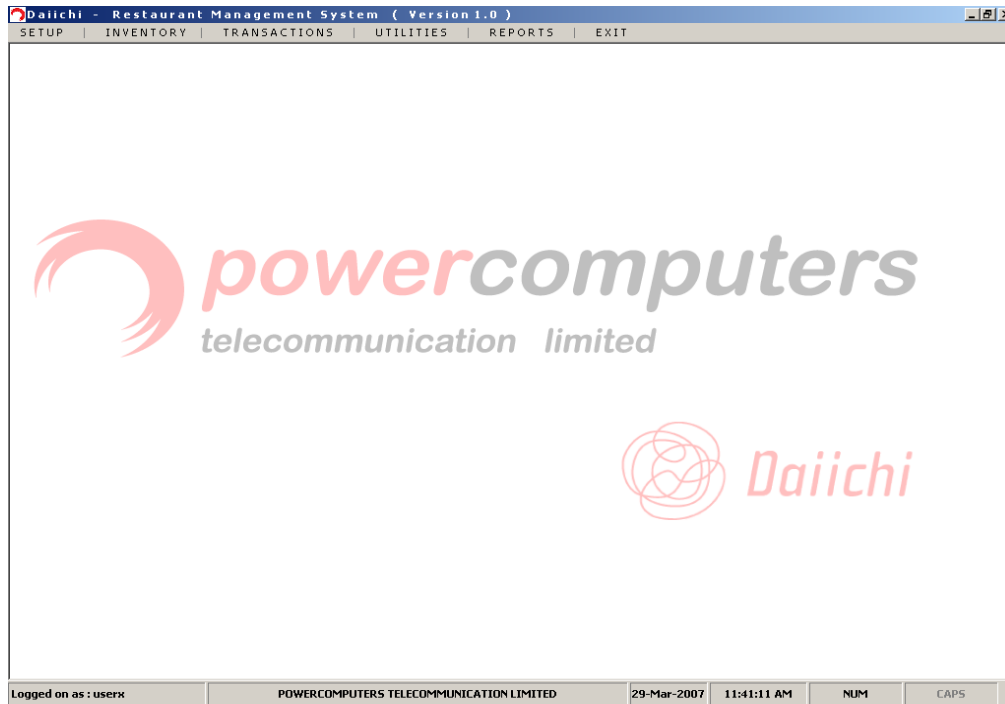

Application begins with Login authentication where by appropriate user name and password can provide access to the system. This will give only valid users an access to the system.

The screenshot shows a login window titled "MSASANI SLIPWAY LIMITED" at the top. Below the title is a yellow bar with the text "MSASANI SLIPWAY LIMITED" in blue. Underneath is a red instruction: "Enter UserName and Password to Logon to the System ...". On the left is a logo featuring a sailboat and the text "MSASANI SLIPWAY LIMITED". To the right are three input fields: "UserName" (text box), "Password" (text box), and "Company" (dropdown menu with "Msasani Slipway Ltd" selected). At the bottom right are "OK" and "CANCEL" buttons. A blue bar at the very bottom contains the text "Restaurant Management System" in blue.

Once the user logs in, the main screen shows up. You will see 6 main menus or mode of operation for users to work accordingly. Some options may not be visible depending on rights set by Application Administrator.

This software has 6 main menus and its operation and usage are described below:

SETUP

This Module 'SETUP' is for Setting up the Software according to the company needs.

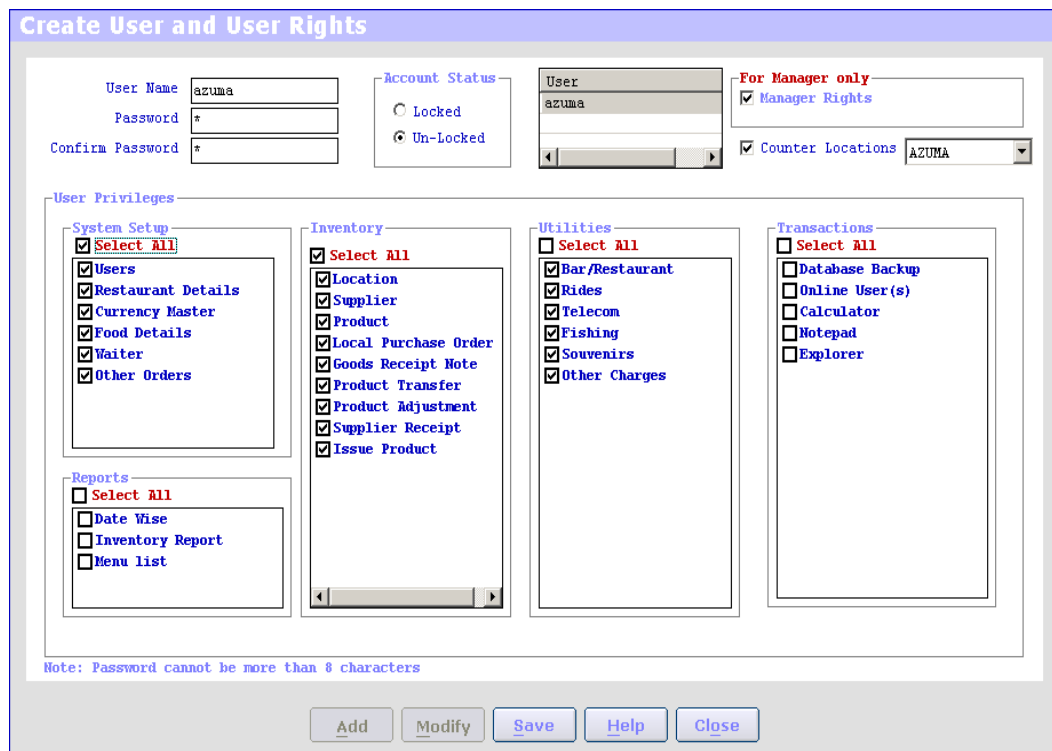

'SETUP' contains various sub-modules as described below:

User: This is used to manage the User Information. Any user who is going to use this Software has to have a user name and a password to Login to the System. This sub-module has 3 sub modules, which are:

Create User: This is used to create the users. It maintains user name, his/her password, the rights assigned to the user and account status. Rights are assigned for Security Reasons. Rights are on Each Form of the Software so that the User has restrictions to some forms.

Modify User: This is to Modify the User Information which is already been saved in the Database. This is used by the Administrator to change the user name, password, Rights and the account status of the users.

Change Password: the User for changing his/her Password for Security Reasons uses this.

Restaurant Details: This is used to maintain the details about the Restaurant such as the Restaurant name, Contact person, addresses, telephones/fax, city, Country, email, VRN No., TIN No. VAT etc. The Company Details should be correct because this information is going to be the Header of Each Reports Printed.

Currency Master: This module enables users to feed-in multi-currency details and its corresponding rates. All system users to know and calculate currency conversions when required can also use the rates applied for foreign currency. Easy searching of currency and its rates make this module very user friendly.

Food Details: This module has 6 sub-modules:

Unit of Measure: This module stores all the necessary measures the Restaurant uses to measure the ingredients of food items.

Ingredients: This will allow the application users to feed in all the ingredients the Restaurant uses.

Category: This module takes care of storing all the main categories of items the Restaurant has. If needed you can flexibly change and modify the details when required.

Sub Category: This will allow the application users to feed in all the sub categories of the main category item.

Unit of Sell: This will allow the application user to store the mode of sell the items need to be sold in.

Food: This will allow keeping records of all the details about the food.

Waiter: This module stores the details of the waiter's working in the Restaurant.

Other Orders: This includes 5 sub-modules. These are the other orders the customer may wish to use.

Rides: This has got 2 sub-modules: Rides types and Rides. This will allow the application users to feed in the details of all the ride types the Restaurant offers for its customers.

Telecom: This module helps to store the different telecom the Restaurant offers for their customer.

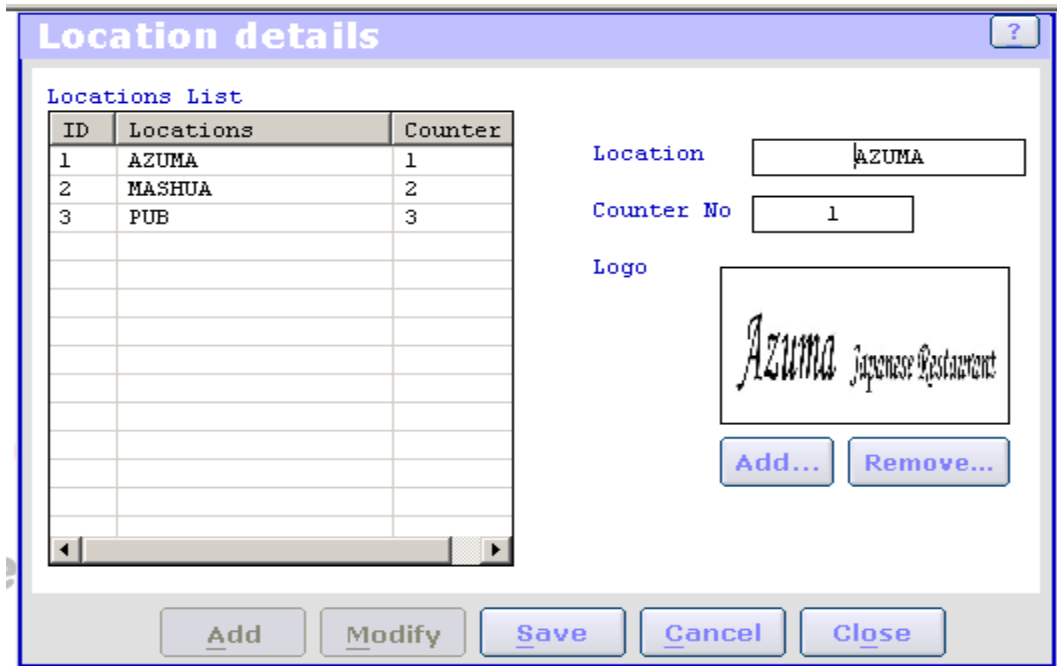

Fishing: This module stores the details of fishing the Restaurant offers with its rates.

Souvenir: This includes all the souvenirs the Restaurant has for its customers.

Other Charges: Other charges include the charges of other items which need to be pay by the customer if used.
